

ELECTRIC/BI-FUEL BOOMS

G30R

The G30R gives you a cherry picker with zero tailswing and zero front arm swing in stowed and raised working positions. Along with a narrow 1.19m chassis this boom is one of the few with true narrow aisle access. The 1.22m jib boom has 139° range of motion, so it can be positioned above or below horizontal. Non marking tyres as standard this has proved to be a very popular machine for all different sectors.

Specifications

Working Height	11.14m
Platform Height	9.14m
