

### DIESEL BOOM

# S45

The S45 features an exclusive directional sensing drive and steer controls, which ensure the boom lift will always drive and steer with respect to the operator rather than the orientation of the chassis. The axle based 4WD system offers unsurpassed traction and terrain-ability; using a no spin differential on the rear axle and limited slip differential on the front oscillating axle. A great 4WD machine which can be used on a number of applications.

## Specifications
