

DIESEL BOOM

S65

The S65 has a Ramped boom control system provides smooth boom functions and gives you a finer control also it has Virtual pivot primary boom which aligns the machine's center of gravity to give you a lower machine weight. Positive traction drive maintains equal power to all drive wheels and with its Fixed-width axles it allows a faster setup. Active oscillating axle option enhances traction on rough terrain which means it will drive through the toughest of areas. The S65 also has a 360° continuous rotation turntable for quick positioning as standard.
