

DIESEL BOOM

S85

The S85 is perfect for areas with limited access in construction and industrial applications. It has a ramped boom control system that provides smooth boom functions and gives you a finer control. It also has a virtual pivot primary boom which aligns the machine's centre of gravity to give you a lower machine weight. Positive traction drive maintains equal power to all drive wheels and with its fixed-width axles it allows a faster setup. Active oscillating axle option enhances traction on rough terrain which means it will drive through the toughest of areas.

Specifications

Max Lift Height	27.90m
Platform Height	25.90m
Overall Length	12.37m
Stowed Height	2.80m
Deck Extension	N/A
Width	2.44m
Weight Overall	16266kg
Cage Capacity	227kg
Horizontal Outreach	23.60m
Fold-down Hardrail	No
